

Innovation day

A reflection by Gila

Problem

1.

Our problem was how can we create a public space safely while using hydropower. of course, we couldn't make real hydropower so we wanted to make a demonstration.

hypothesis

2.

We thought we were going to make a scene that demonstrates hydropower.

Materials

3.

We used soda cans for pillars, a couple containers for water storage and recycled materials for the water wheel.

procedures

4.

our procedure was rough. we started off thinking that we were going to build a scene that demonstrated hydropower but we slowly relized that we were behind and if we didn't hurry up we wouldn't meet the deadline. we decided to change our project. ari and nathan built the project at home while i did the reaserch and made the board.
